"It was necessary to know how to mix the old and the new, the familiar and the strange, which may be an unstable dichotomy, without ever being the incongruous, the esoteric or the alien." JM. Providence. Created by magical intervention and a strong idea by Nouvel, the bridge (Pass'erelle) retraces the journey of coal towards a sorting that no longer exists. It is 210 m long and takes the visitor from the panoramic viewpoint, 17 m above the ground. It invites him to the exhibitions in the Pass'age, the Belvédère, the engine room Chapiteau.
